We empower employees to do
their best work from anywhere
through **smart, seamless, and
secure** experiences

The Omnissa platform

IT is caught between embracing the latest trends and managing legacy challenges

It's time to re-center digital work around the human experience...

for your end users

Enable and secure digital work experiences across personas –always and anywhere

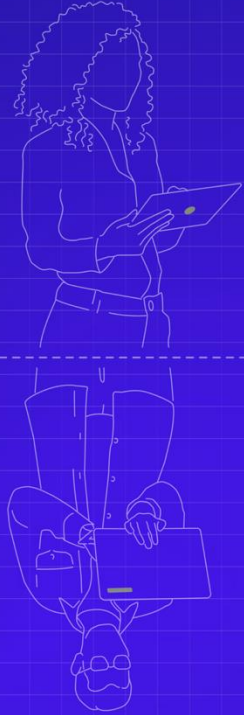

for your IT staff

Simplify existing jobs to be done, while rapidly adapting to new needs

Horizon ecosystem expansion

Powering secure and modern workspace across any cloud with Horizon

The engine behind virtual desktops and apps that drives modern work

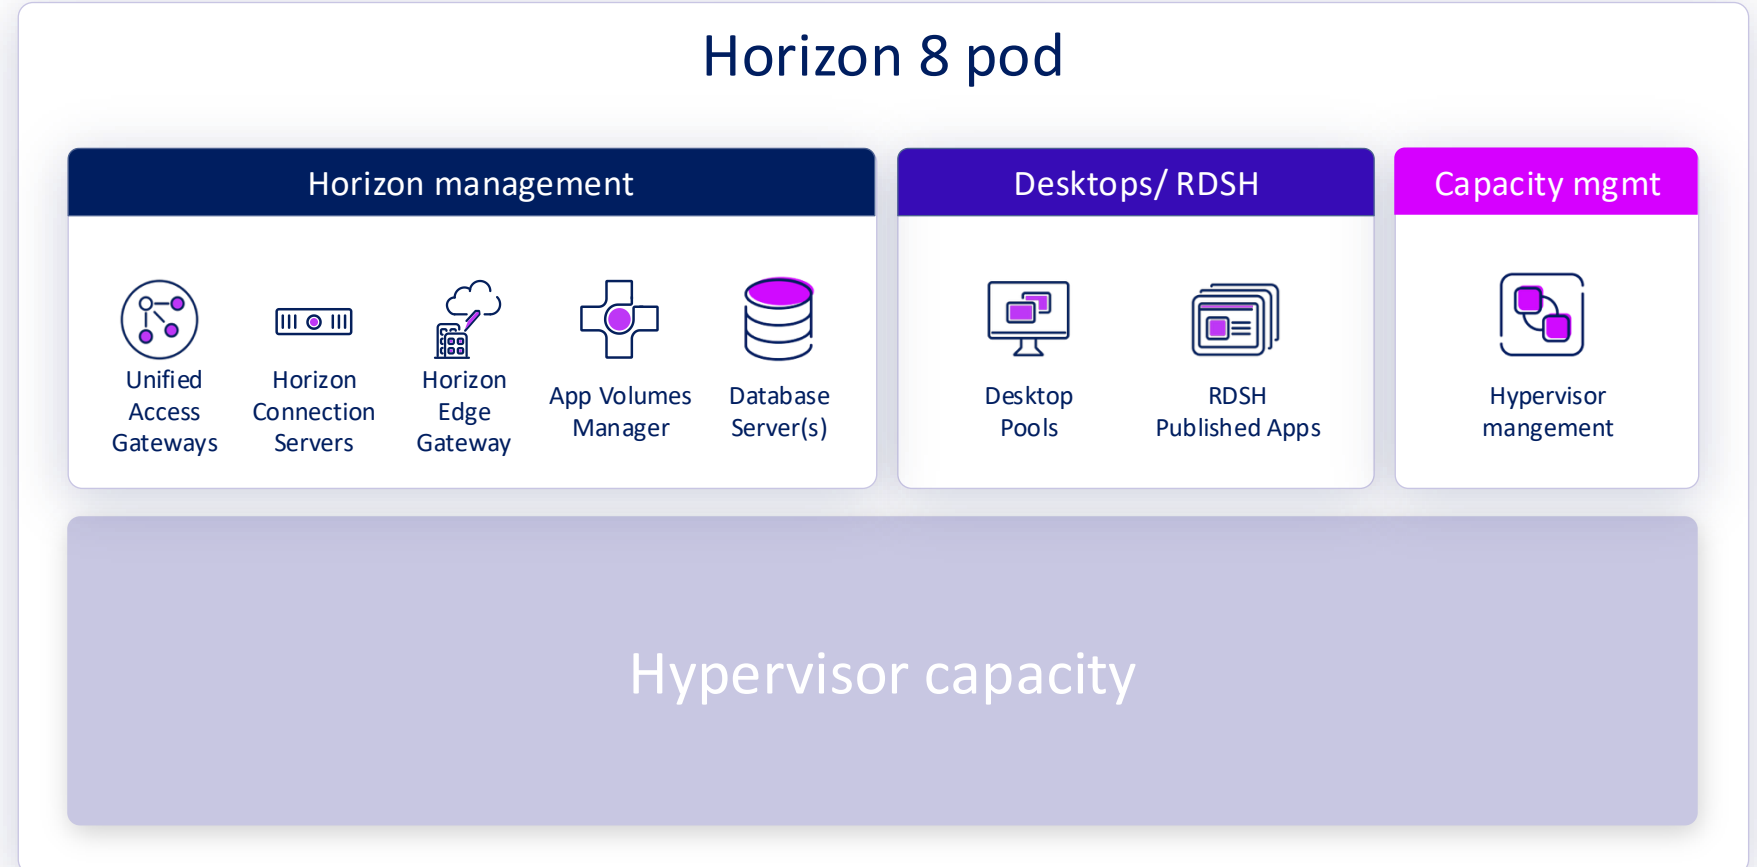

Horizon 8 + Horizon Cloud Platforms– What’s the Difference?

	Horizon 8	Horizon Cloud
What’s similar?	• End user experience and security features. Same Horizon Agents and Clients, AV, DEM • VDI and app capacity on-premises or in the cloud	
What’s Different?	• Customer-managed VDI, software download • Customizable deployment, flexible upgrade schedule, more control • The only option for air-gapped environments and those that require federal certifications • Recommended for deployment in healthcare where Imprivata is required • Choice of Term and SaaS licenses	• Omnisca-managed DaaS control plane, managed from the cloud, uptime SLA • Data plane managed by either by customer or by cloud vendor • Architecture optimized for fleet management and multi-tenancy • 24/7 proactive monitoring and support • Streamlined deployment, standardized upgrade schedule • SaaS licenses only
Outside of the federal environment, platform choice should be driven by desired management model		

Horizon 8 multi-hypervisor support

Background and motivation

- Give customers more choice in how and where they run Horizon virtual desktops and applications
- Extend Horizon support and integration
- Offer options, choice & flexibility

Horizon 8 multi-hypervisor support

Integration

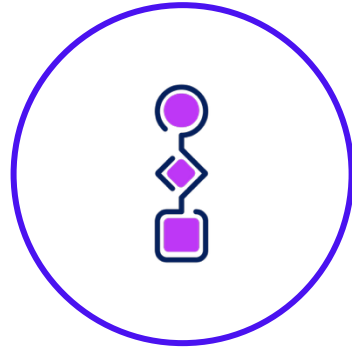

Horizon Desktop + App workload support - Available today through manual pools & farms, and App Volumes in-guest VHD mounting

Horizon 8 multi-hypervisor support

Provisioning pools and farms

What about instant clones?

Instant clone – Mode A

- vSphere Instant Clone APIs
- Cloned from memory of stunned VM
- Memory overhead
- Requires reboot to add vGPU/vTPM
- ClonePrep customization
 - Horizon technology

Instant Clone – Mode B

- Linked clone disk type
 - Not View Composer
- ClonePrep or SysPrep customization
- Mode B is default behavior today

Provisioning on new platforms

- Leverage platform cloning capabilities for fast provisioning and refresh, e.g. Nutanix redirect-on-write clones and recovery points
- ClonePrep or SysPrep customization
- Similar cloning path and speed advantages to Mode B Instant clones

Horizon 8 multi-hypervisor support

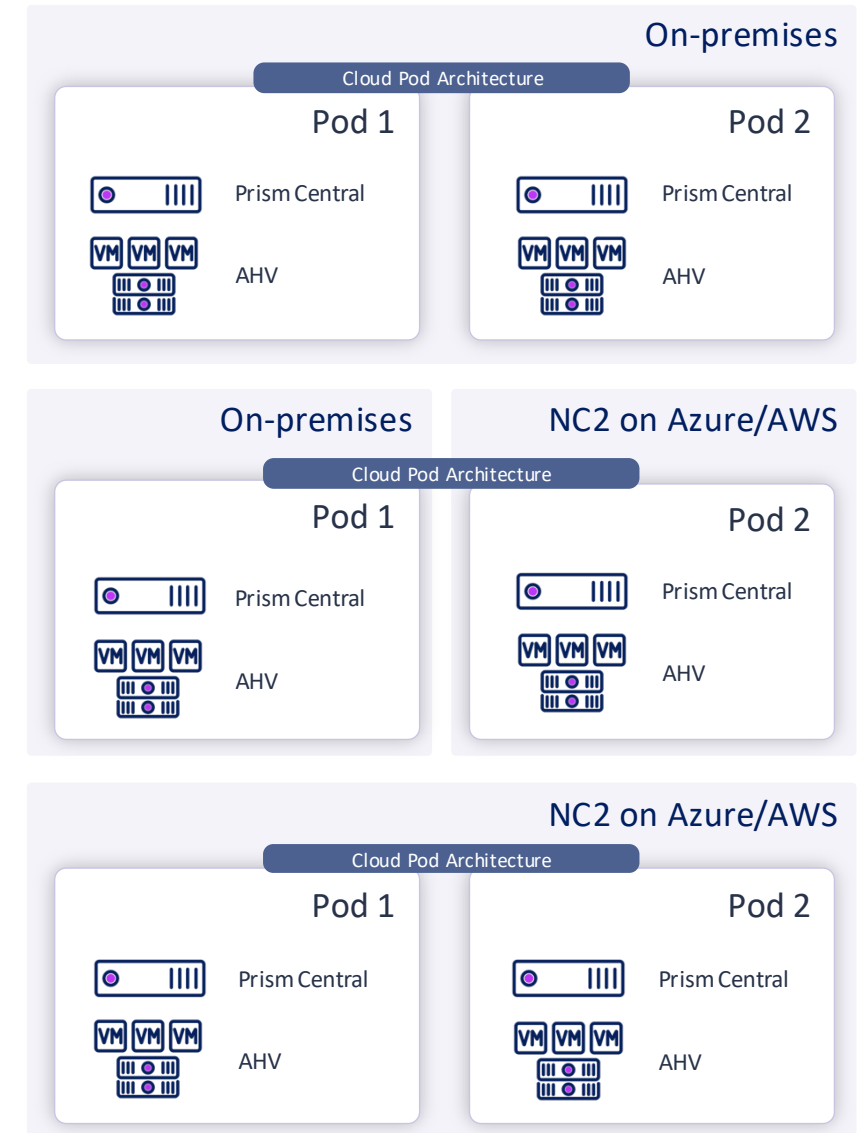

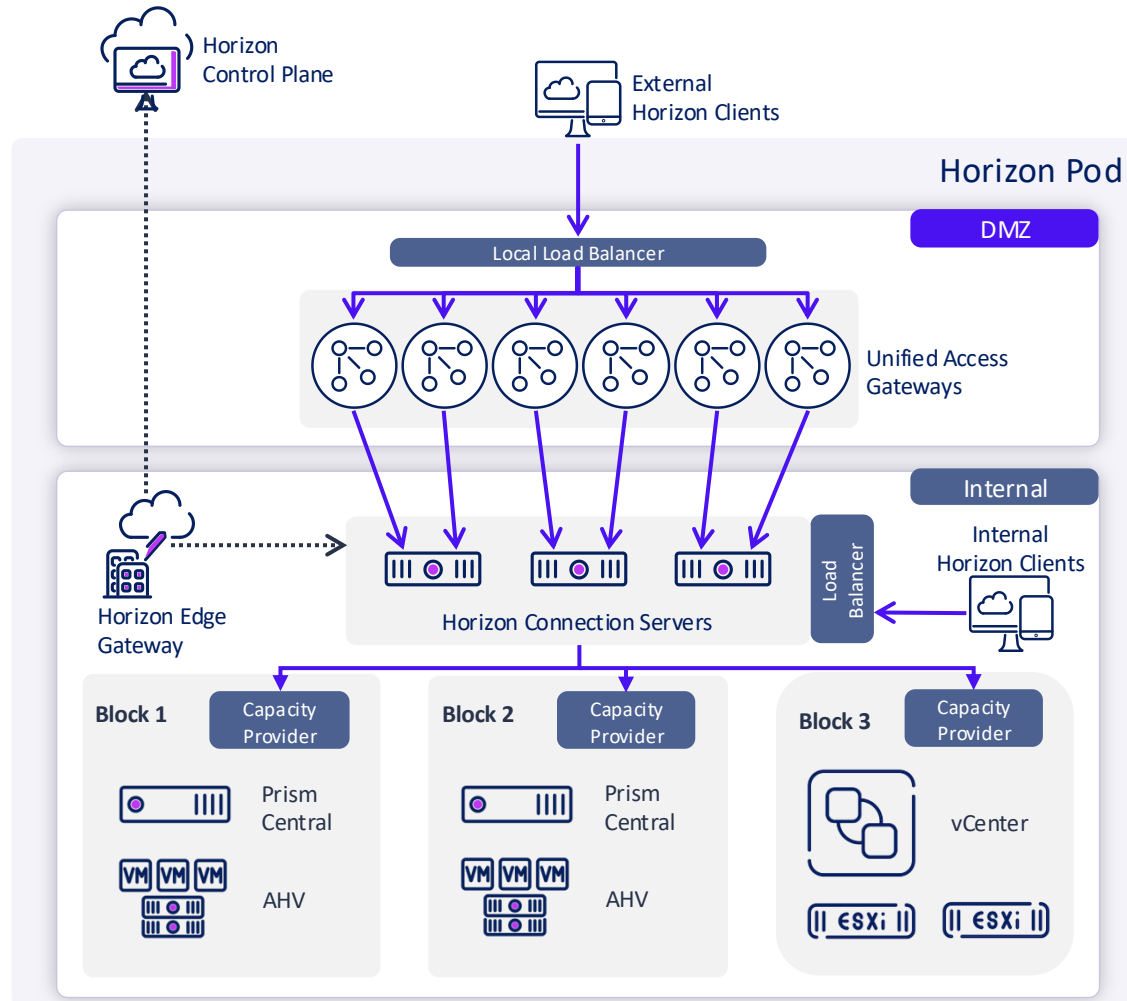

Clone customization

- Making each clone unique
 1. SysPrep
 - Provides unique SID
 - Requires multiple reboots
 2. Horizon ClonePrep
 - Customizes without new SID
 - Minimal reboots

Horizon 8 multi-hypervisor support

Deployment topologies

Horizon hypervisor and hyperscaler support

Manual pools and farms update

Horizon Cloud

- Manual pools and farms in 2512
 - published desktops only
- Manual farms - published apps in 2603
- Requirements
 - Edge deployment on a supported platform (AWS, Azure, vSphere)
 - Network line of sight between Edge and the desktop/RDSH
 - Machine identity reachability, e.g. AD access from both Edge and VMs
 - Windows guest-only, and VM-only

Horizon 8

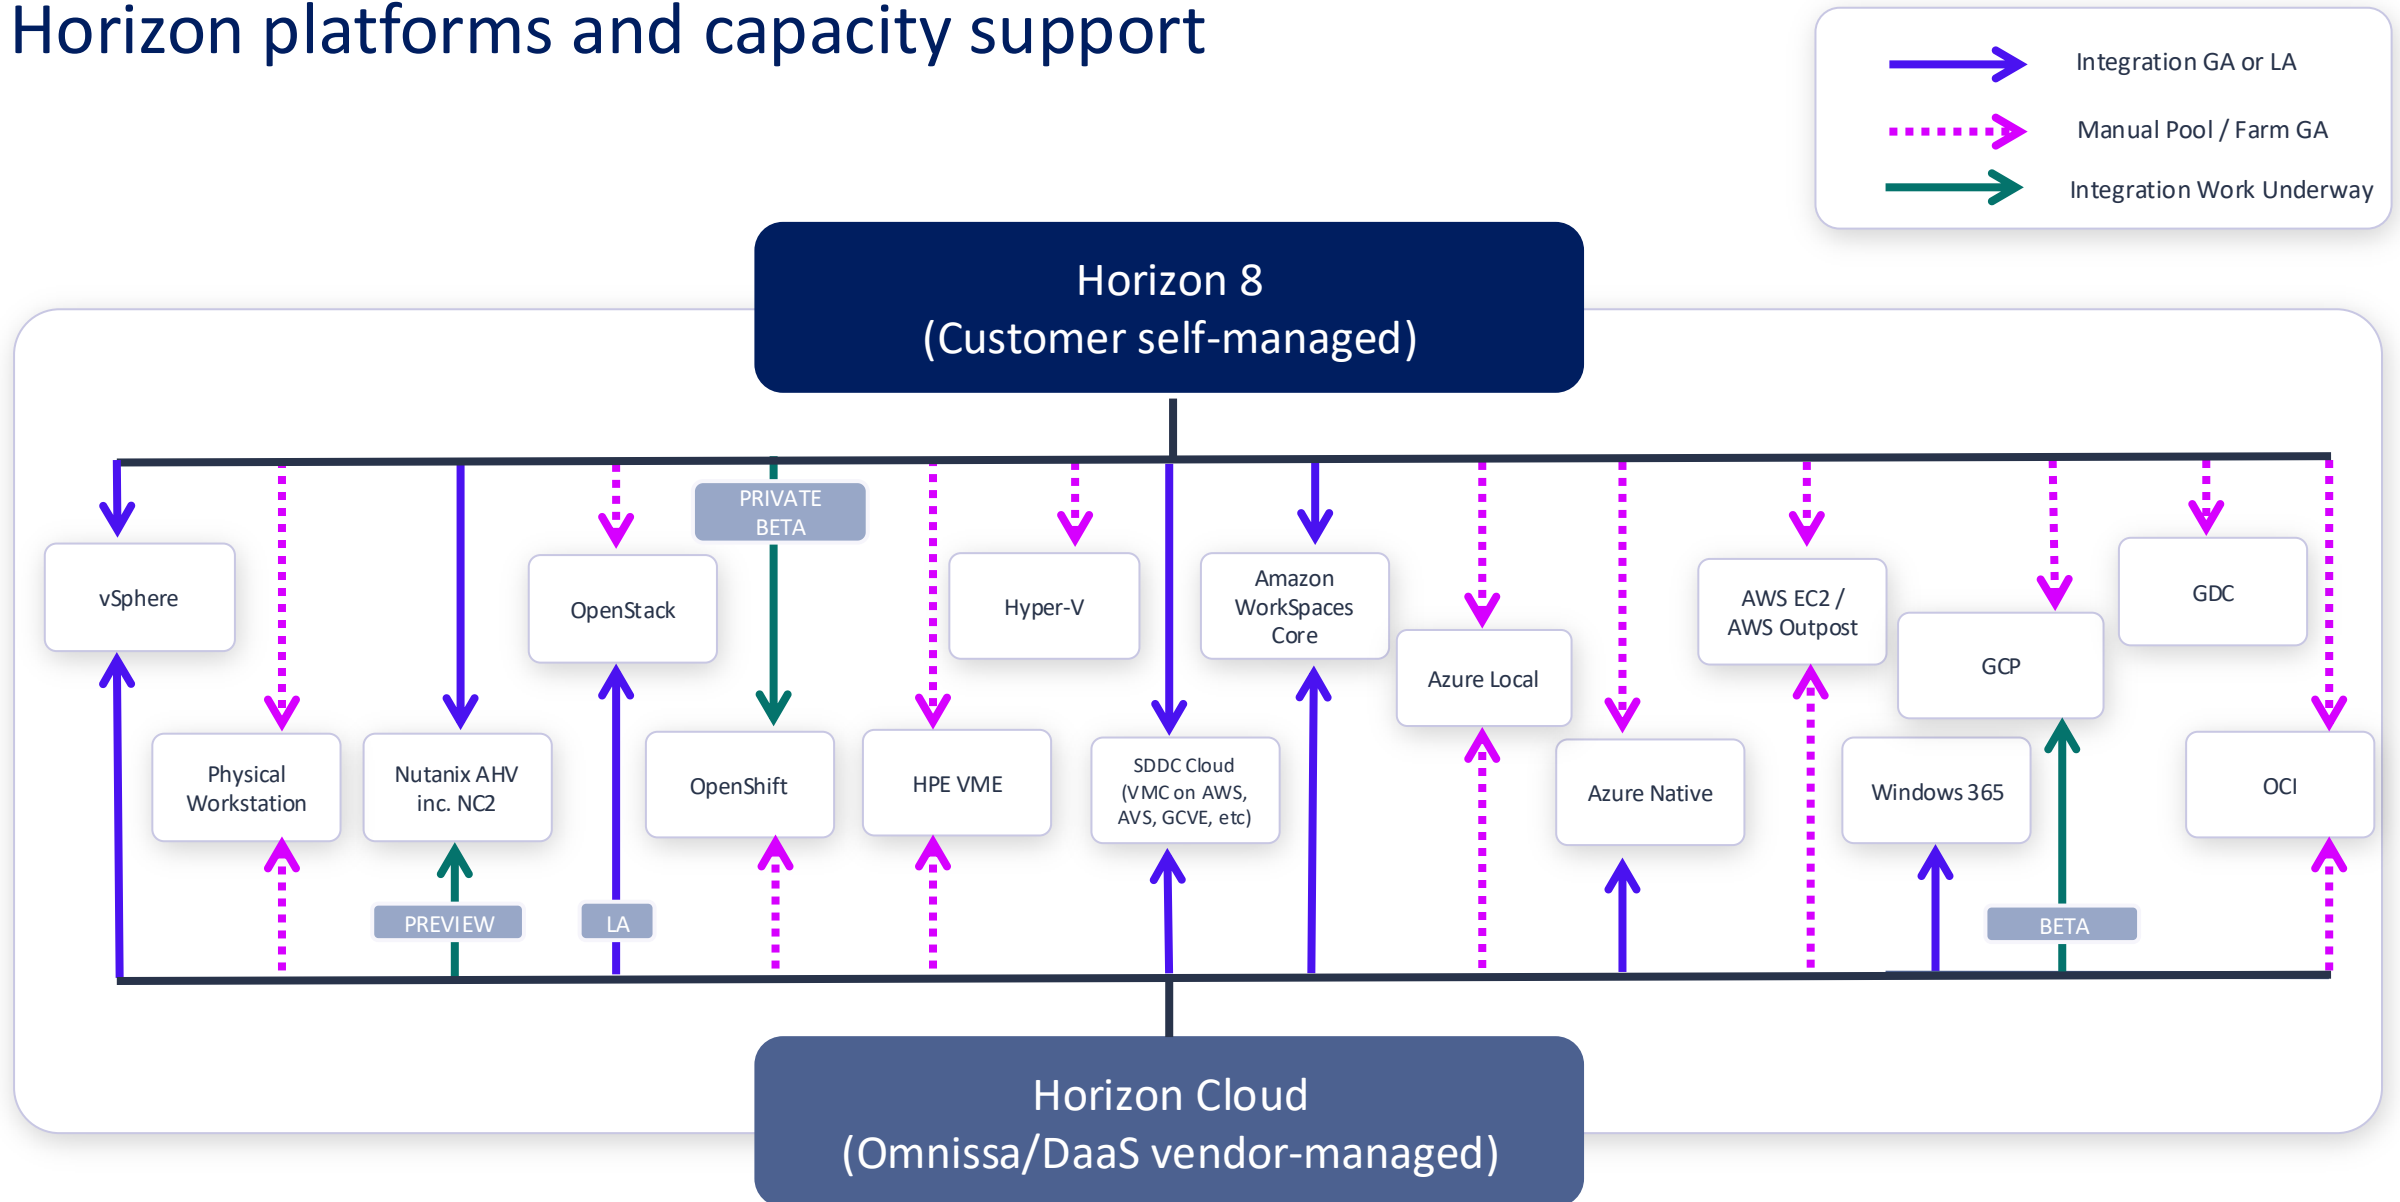

- Machine credential pairing in 2512
 - allows domain-joined unmanaged agents to be installed without AD credential requirement
 - enabler for external provisioning automation without requiring embedded admin credentials
- Horizon Ready Hypervisor program

Horizon Ready Hypervisor – TAP program

- Launched October 2025
- Designed to give customers greater choice and partners the official branding needed to showcase their Horizon-compatible solutions
- First vendors progressing through validation:
 - HPE
 - Platform 9
 - Arcfra, Singapore
 - AbleCloud, Korea

The screenshot shows a web browser window with the URL techzone.omnisssa.com/resource/horizon-ready-hypervisor. The page features the Omnisssa logo and a navigation menu with links to Start, Products, Solutions, Blog, and Community. A search bar is located on the right. The main content area is titled "Horizon Ready Hypervisor" and includes an "Overview" section. The overview text states: "This Program enables hypervisor product (software) manufacturers to work with Omnisssa to ensure that their hypervisor products ('Partner Software') are compatible with Horizon (in Manual Provisioning Mode). As organizations increasingly adopt a diverse set of infrastructure platforms, there is growing demand for flexibility in virtual desktop infrastructure (VDI) environments. To meet this need, Omnisssa is launching a certification program for third-party hypervisors to certify with Omnisssa Horizon using Manual Provisioning Mode. This program is designed for hypervisor product vendors who want to validate the compatibility of their platforms with Horizon 8. Manual Provisioning Mode enables Horizon to broker connections to workloads that are provisioned and managed outside of Horizon's native automation capabilities such as persistent virtual machines or even physical desktops offering organizations the flexibility to leverage non-standard or unsupported platforms while still delivering a consistent end-user experience. The Horizon Ready Hypervisor certification program supports enabling technology partners to certify their hypervisor products with the Omnisssa Horizon product (in Manual Provisioning Mode), ensuring stable performance and supportability. Details of Manual Provisioning Mode are described [here](#). The program requires partners to execute a prescribed set of product certification test cases provided by Omnisssa and submit results for review to Omnisssa. Omnisssa team will review and approve the results. Approved results will be posted by Omnisssa team on Omnisssa Horizon Ready Hypervisor Compatibility guide (OCG). This listing signifies that the product certification was successfully completed and the product is compatible with Horizon (in Manual Provisioning Mode) and supported by Omnisssa."

Horizon platforms and capacity support

Horizon 8 hypervisor and hyperscaler support

Platform	Status	Updates
VMware vSphere/VCF Includes public cloud VMware SDDC support (VMC, AVS, GCVE, OCVS)	GA	vSphere/VCF 9.1 support from Horizon 8 2603 VVF for VDI 8.0 ongoing support from Broadcom
VMware Cloud Director	LA	Support based on VCD 10.x Support for VCF Automation (VCFA) on roadmap
Amazon WorkSpaces Core	GA	Support for Core Managed Instances on roadmap
Nutanix AHV Includes Nutanix Cloud Clusters (NC2) support on AWS/Azure/GCP	GA	GA in 2512 Ongoing roadmap
Red Hat OpenShift	Beta	Private Beta recently launched

Horizon Cloud hypervisor and hyperscaler support

Platform	Status	Updates
Microsoft Azure	GA	Azure cost insights - Incurred cost, potential cost, estimated savings Data-driven recommendations (beta) to help optimize
Amazon WorkSpaces Core	GA	Support for Core Managed Instances on roadmap
Microsoft Windows 365	GA	Brokering only (No provisioning)
VMware vSphere/VCF	GA	
OpenStack	LA	LA in 2605 Vendor-managed and generic OpenStack
Nutanix AHV	Preview	
Google Cloud Platform	Beta	Includes management of Sole-Tenant Nodes
